

# MEDICINE - KILL OR CURE?

## Science

Identify and name the main parts of the human circulatory system, and describe the functions of the heart, blood vessels and blood

Recognise the impact of diet, exercise, drugs and lifestyle on the way their bodies function

Describe the ways in which nutrients and water are transported within animals, including humans

## Key Questions

How has medicine changed over time? Has medicine always improved from century to century? Was it the same across the world? What developments in science helped doctors become more effective? How Did Scientists Discover the Causes of Disease?

What are the names and life stories of the scientists most closely associated with these developments? What has the role of public health and housing been?
